

Test Summary Report

Manual Testing Project – Test Summary Report

Application: E-Commerce Web Application (<https://www.saucedemo.com/>)

Testing Type: Manual Functional, UI, Regression & Exploratory Testing

Environment: Web Browser

Test Execution: Completed

Metric	Result
Total Test Cases	156
Passed	121
Failed	08
Blocked	27
Defects Identified	07

Scope

- Login
- Product Listing
- Product Sorting
- Shopping Cart
- Checkout
- Logout
- End-to-End workflows
- Additional user/account testing

Key Defects Identified

[Final Bug Report](#)

Conclusion

Manual testing was completed across the key functional areas of the E-Commerce Web Application, including Login, Product Listing, Product Sorting, Shopping Cart, Checkout, Logout, End-to-End workflows, and additional user/account testing.

A total of 156 test cases were executed, with 121 test cases passed, 8 failed, and 27 blocked. 7 defects were identified and documented during testing. The testing covered functional behavior, UI behavior, input validation, navigation, cart and checkout workflows, order processing, and order confirmation functionality.

Retesting was performed where necessary to verify observed issues and ensure that only valid defects were included in the final bug report. The blocked test cases were primarily related to functionality or requirements that were not available or specified for verification.

Overall, the testing provided coverage of the application's major user workflows and identified functional and UI issues requiring further attention.
