

TEST PLAN

We'll start with three sections:

Project Overview

Test Objective

Scope

I've drafted the first two from what you discovered. You can review them and then we'll define the scope together.

1. Project Overview

Project Name: SauceDemo Manual Testing Project

Application Type: E-commerce Web Application

Testing Type: Manual Functional Testing

Testing Approach: Black-box testing

Application Under Test: SauceDemo

Project Description

SauceDemo is an e-commerce web application that allows users to log in, browse products, add products to a shopping cart, proceed through checkout, and complete an order.

The purpose of this project is to perform structured manual testing of the application's key functionality and user workflows, identify defects, and document the testing results using industry-standard QA documentation.

2. Test Objective

Our objective is:

To verify that the core functionality of the SauceDemo application works as expected, including user authentication, product browsing, cart functionality, checkout, and order completion.

The testing will also evaluate input validation, negative scenarios, boundary conditions, navigation, and basic UI behavior to identify defects that could affect the user experience or critical business workflows.

3. Scope

3.1 In Scope

The following functionality will be covered during manual testing:

1. Login

- * Valid credentials

- * Invalid credentials
- * Empty mandatory fields
- * Login validation and error handling

2. Product Listing

- * Product name
- * Product image
- * Product price and currency
- * Product display and availability

3. Product Selection

- * Selecting/viewing products
- * Adding products to the cart
- * Removing products from the cart

4. Product Sorting

- * Name: A–Z
- * Name: Z–A
- * Price: Low–High
- * Price: High–Low

5. Shopping Cart

- * Cart item count
- * Adding and removing products
- * Product details
- * Product prices
- * Cart total

6. Checkout

- * Customer information
- * Mandatory field validation
- * Checkout workflow
- * Validation of information entered by the user

7. Order Completion

- * Successful order completion
- * Confirmation message
- * Verification of order information displayed after completion

8. Logout

- * Logout functionality
- * Post-logout application behavior

3.2 Out of Scope

The following areas are excluded from this testing cycle:

1. Performance, load, stress, and endurance testing.
2. Security penetration testing and vulnerability assessment.
3. Real-world payment gateway or financial transaction validation.
4. Backend/database testing and direct database validation.
5. Comprehensive cross-browser and cross-device compatibility testing outside the selected test environment.
